SPEED7 Studio Version 1.9

Available for download

SPEED7 Studio version 1.9 has been released, bringing server simulation for the OPC UA configuration tool, usability and stability improvements as well as general bug fixing.

What's New:
- OPC UA – simulated server for checking the correct creation of the address space and connection settings.
- Insert blocks from the catalog into any editor (STL, FBD, LAD) via drag & drop.

What's been improved:
- Catalog navigation.
- Display of status information (errors and warnings) on the project tree.
- Variable creation on the code editor via shortcut (Ctrl + J).
- General performance improvements for hardware configuration related tasks.
- General usability and workflow improvements throughout the software.

What's been fixed:
- General bug fixing for the code editors, fieldbus hardware configuration, HMI configuration and software framework.
